Make the world a safer place
by building an Instauth standard with wide adoption...

"How to make Instauth the standard?"

What is Instauth?

Connect any charm to the Instauth Charm and it will download an adapter from the repo, execute it inside the connected charm and then make the charm talk to any charm that implements the Auth relation. Native Instauth don't need an adapter...
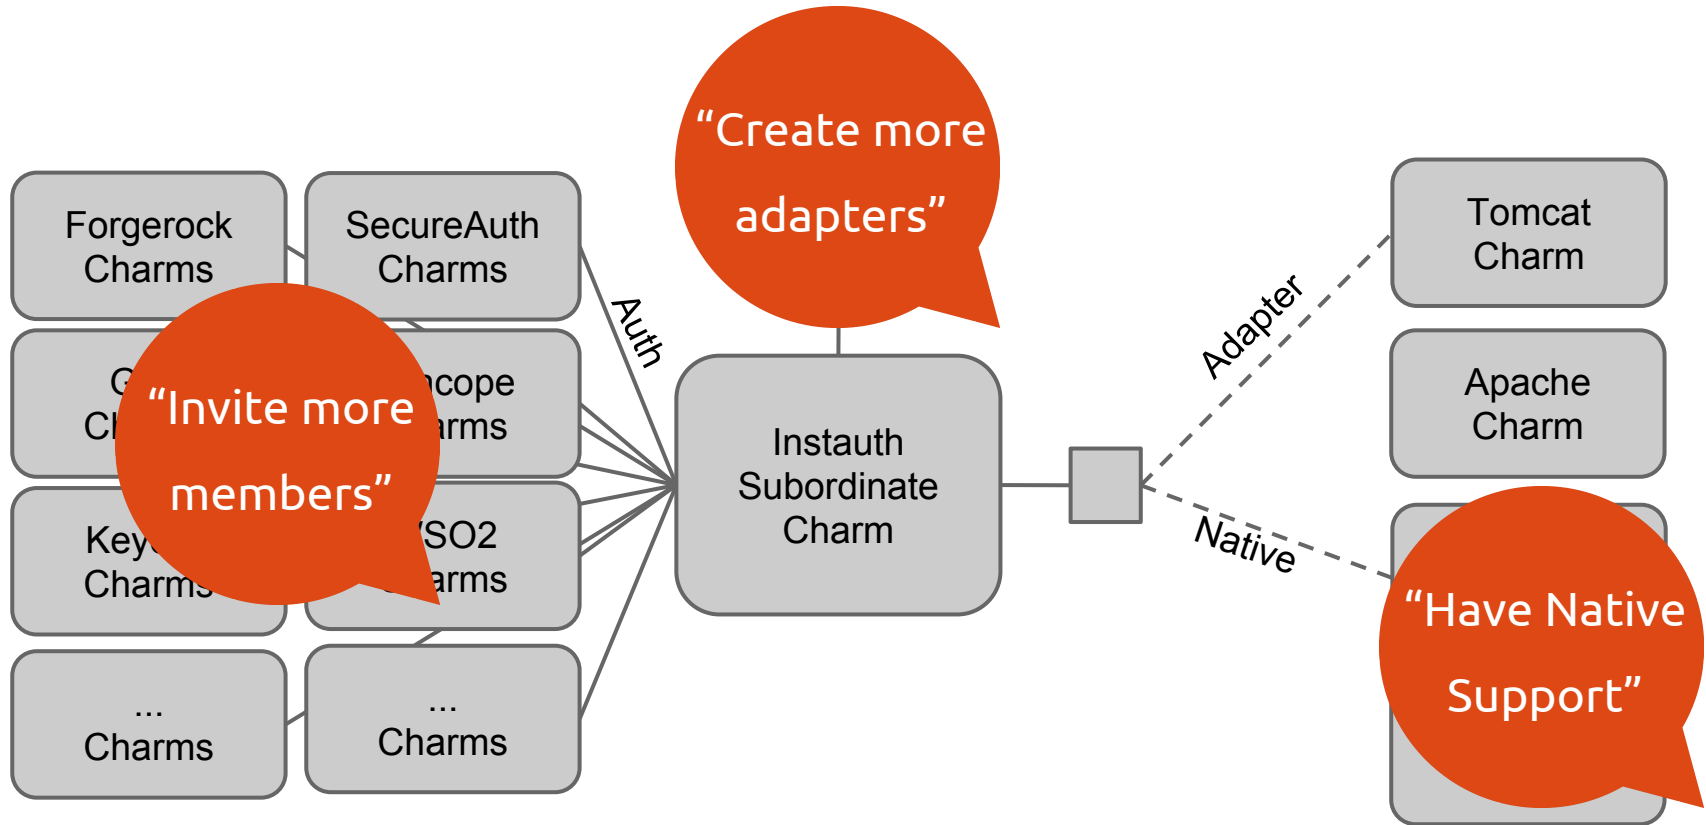

Goal?

Instauth is THE Open Source SSO and 2FA Standard
If your software hasn't been "instauthed" then it is not enterprise-ready

How to build the Instauth Community?

Teams that deliver and can grow separately

- Core team - define how "auth" charms, IDMs, talk to "instauth" native/adapters, the rest.
  Leader(s): Kiran Ayyagari(Keydap), Mikel Schwartz (Gluu), Garret Grajek (SecureAuth)
  Chris Hayes (SecureAuth/juju@secureauth.com)

- IDM team - get more "auth" charms.
  Leader(s): Jeff Lo (SecureAuth)

- Repo team - create a few adapters and convince others to create "instauth" adapters.
  Leader(s): Kiran Ayyagari(Keydap)

- Native team - create one native charm and convince others to natively support the "instauth" relation.
  Leader(s): Maarten Ectors (Canonical); Garret Grajek (SecureAuth); Chris Hayes (SecureAuth)

- Virgo team - integrate the solutions of the core, auth, repo and native team.
  Leader(s): Florian, Glyn (Virgo charm)

- Promo team - promote "instauth" to the outside world, e.g. website, twitter, email, etc.
  Leader(s): Will Lowe (Gluu)

We need extra volunteers to deliver and grow the teams

Tools

- Github - code repository, designs?
- Google Groups - discussions, meeting minutes
- Hangouts - group communication
- CI? Travis?
- Bug tracking? Github?
- Scrum tool?

Github, Google Groups, Hangouts. What more?

High-Level Plan

1. 28th February - Auth Charms & Virgo Relation
2. 14th March - Auth Charms Manage Tomcat
3. 28th March - Repo with 3 adapters & 1 native
4. 30th April - 20 adapters & 5 native charms - made by others

What are our milestones?

Help us make the world a safer place...
